DETAILED ACTION

Response to Amendment

The objection to the specification and the rejection of claim 10 as described in the office action mailed on September 5, 2003 have been withdrawn in view of the amendment filed on October 3, 2003.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11-19 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Brandl et al. (US 5,441,548).

The Brandl reference discloses a bituminous oil that is separated from an emulsion. This bituminous oil product appears to be the same as claimed because it is recovered from an emulsion as claimed. The bituminous oil is then partially oxidized to produce carbon monoxide and hydrogen. Oxidation temperatures range from 1300° to 1500°C. See column 2, line 43 through column 5, line 37.

In the event any differences can be shown for the product of the product-by-process claims, as opposed to the product taught by the reference of Brandl, such differences would have been obvious to one of ordinary skill in the art as a routine modification of the product in the absence of a showing of unexpected results. See *In re Thorpe*, 227 USPQ 964 (Fed. Cir. 1985).

Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brandl et al (US 5,441,548) in view of EP 0790292.

The Brandl reference discloses a bituminous oil that is separated from an emulsion. This bituminous oil product appears to be the same as claimed because it is recovered from an

emulsion as claimed. The bituminous oil is then partially oxidized to produce carbon monoxide and hydrogen. Oxidation temperatures range from 1300° to 1500°C. See column 2, line 43 through column 5, line 37.

The Brandl reference does not disclose the cooling of the gas by indirect heat exchange means as claimed.

The EP 0790292 reference discloses the cooling of a synthesis gas by indirect heat exchange to a temperature between 200° and 400°C. See page 5, lines 6-8 and claim 5.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the gasification of Brandl by cooling the gas as suggested by the EP 0790292 reference because heat recovery improves the economics of the process.

Allowable Subject Matter

Claims 1-9 are allowed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 1764

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
